Components of a Workout

Warmup - The warmup is critical! It slowly increases the heart rate and blood flow to muscles, loosens joints, and gently stretches the muscles before working them, which helps prevent injury.

Drills - Drills are like broccoli. You may not like them, but they’re good for you! Drills are great for activating and strengthening muscles before use. They help in injury prevention and will help improve form.

Main Set - this is the “meat and potatoes” of a workout. Learning how to decipher your workout description can be tricky.

Example:

> 2x15min Z3 ride, 5min Z2 recovery
  This means you will ride in Zone 3 for 15 minutes, then in Zone 2 for 5 minutes. The “2x” at the beginning indicates you will do this 20-minute segment twice (15-minute work followed by 5-minute recovery).

> Warmdown - A warmdown aids in recovery. If you want to be able to move in the morning, warm down! Finish up with light stretching.

Missed Sessions

If you miss one or more training sessions, don’t try to cram them in with other workouts on a different day - that can compromise the integrity of the scheduled workout. Add a comment in TrainingPeaks regarding the missed session. For interval work or long days that are building weekly, bump that session to replace the one scheduled the following week. Remember, there’s no cramming fitness!

Try to complete all workouts, but be kind to yourself when an occasional miss happens. One missed session will not make or break your season.

Perceived Effort, Heart Rate & Pace Zones

The level of intensity is manipulated in training to create fitness adaptations in various metabolic systems. Heart rate and power are great tools for setting and monitoring these intensity zones, but rate of perceived effort, or your sense of how “hard” an effort is, is also a great gauge. If you choose to use a power meter or heart rate monitor, there are many sources available online to test and designate training zones.

“Aside from building fitness to race 100- to 200-mile gravel events, the biggest benefit to focused training with a coach is that my recovery time has been significantly minimized. I’m no longer crushed in the days following a big ride.”

- USA Cycling Coaching Staff
Rate of Perceived Effort:

Rate of Perceived Effort (RPE) is frequently used on different scales. For ease, the scale in this training plan uses a scale of 1-10.

The Zones:

> Zone 1 - Recovery Zone
   Rate of Perceived Effort (RPE) is <5. Should feel very easy, almost guilt-inducing! Zone 1 is great for recovery after a harder interval, or for an entire recovery session as movement at an easy pace can help develop economy.

> Zone 2 - Aerobic Endurance
   RPE is in the 5-7 range. Pace and effort feels very easy at the beginning, but if held for a long duration becomes more and more challenging. If running or cycling at this level, it should be easy to hold a conversation. Many athletes have a hard time with the idea of training slow on purpose. But some really cool stuff happens during aerobic training. It helps increase stroke volume (the amount of blood pumped per beat), aerobic enzymes, mitochondria, and capillarization. To learn more about the benefits of aerobic training, check out online resources.

> Zone 3 - Tempo
   RPE is 7-8, conversation is difficult to hold.

> Zone 4 - Lactate Threshold
   RPE 8-9. A tough effort. Legs and lungs are burning! It would be difficult to hold this pace for more than an hour.

   On workouts with Z4 intervals less than 5 minutes, rely on perceived effort and pace rather than heart rate as there is a delay before heart rate rises.

> Zone 5 - Anaerobic
   RPE 10. These efforts can help boost aerobic capacity (VO2max), economy, and anaerobic threshold. In racing, this zone can be used to make short, big pushes. Intervals are short (if you can hold the effort for more than 5-6 minutes, you are under the target effort) with rest periods equal to the work interval.

   On workouts with shorter intervals, it will take heart rate a while to catch up. On these intervals, rely on perceived effort and pace rather than heart rate.

p. 4
## WEEK 7

**DAY 1**  
Rest Day  
Tempo Ride 2x30  
Warmup- 20 min gradually increasing pace and effort. Include 6x30-sec 1-leg drills.  
Main Set- 2x30 min Z3; 5-min Z1 recoveries  
Warmdown- 10 min gradually reducing pace and effort to Z1.

**DAY 2**  
Foundation Ride 30mi ride at an easy Z2 effort. Try to keep cadence high, roughly 90rpm.

**DAY 3**  
Foundation Ride with 1x15 Tempo  
25mi ride at an easy Z2 effort. Keep effort at Z2, except include 1x15min Z3.

**DAY 4**  
Rest Day  
Or Easy Cross-training  
(e.g., yoga, hiking, swimming)

**DAY 5**  
Group Ride or Tempo Climb 2x20  
Warmup- 15min gradually increasing pace and effort  
Set- On a hill, 2x20min climbs in Z3, recover on descent back to start.  
If you live in an area where hills are hard to find, put your bike in a big gear, pedal with slow cadence, and sit up tall.  
Warmdown- 10 min easy spin

**DAY 6**  
Foundation Ride 30mi ride at an easy Z2 effort. Try to keep cadence high, roughly 90rpm  
Or Strength Work  
Or Easy Cross-training  
(e.g., yoga, hiking, swimming)  
Or Rest Day

**DAY 7**  
Long Ride- 90-100mi Ideally on terrain similar to your race course:  
Warmup- 10min easy spinning, gradually increasing effort to Z2. Include 4x30sec 1-legged pedaling drill.  
Ride for a total of 90-100mi, or for the anticipated time duration of your event.  
(You will ride faster in your event if you ride in a pack.) Shoot for average effort to be in Z2.

---

## WEEK 8

**DAY 1**  
Rest Day  
Or Easy Cross-training  
(e.g., yoga, hiking, swimming)

**DAY 2**  
Foundation Ride with 1x15 Tempo  
25mi ride at an easy Z2 effort. Try to keep cadence high, roughly 90rpm.

**DAY 3**  
Foundation Ride with 1x15 Tempo  
25mi ride at an easy Z2 effort. Try to keep cadence high, roughly 90rpm.

**DAY 4**  
Rest Day  
Or Easy Cross-training  
(e.g., yoga, hiking, swimming)

**DAY 5**  
Foundation Ride with 1x15 Tempo  
1hr ride. At any point in the ride, include 1x15min Z3. Be sure to warm up and warm down.

**DAY 6**  
Bonus Rest Day or  
Or Easy Cross-training  
(e.g., yoga, hiking, swimming)  
Or Rest Day

**DAY 7**  
Foundation Ride 50mi ride at an easy Z2 effort. Try to keep cadence high, roughly 90rpm.

---

## WEEK 9

**DAY 1**  
Rest Day  
Or Easy Cross-training  
(e.g., yoga, hiking, swimming)

**DAY 2**  
Threshold Ride 1x5:  
Warmup- 15min gradually increasing pace and effort  
Set- 1x5min Z4, 5min recoveries  
Warmdown- 10-20min easy

**DAY 3**  
Threshold Ride 2x5:  
Warmup- 15min gradually increasing pace and effort  
Set- 2x5min Z4, 5min recoveries  
Warmdown- 10-20min easy

**DAY 4**  
Rest Day  
Or Easy Cross-training  
(e.g., yoga, hiking, swimming)

**DAY 5**  
Threshold Ride 2x5:  
Warmup- 15min gradually increasing pace and effort  
Set- 2x5min Z4, 5min recoveries  
Warmdown- 10-20min easy

**DAY 6**  
Threshold Ride 1x5:  
Warmup- 15min gradually increasing pace and effort  
Set- 1x5min Z4, 5min recoveries  
Warmdown- 10-20min easy

**DAY 7**  
Long Ride- 45mi Ideally on terrain similar to your race course:  
Warmup- 10min easy spinning, gradually increasing effort to Z2. Include 4x30sec 1-legged pedaling drill.  
Ride for a total of 45mi, shooting for average effort to be in Z2.

---

## WEEK 10

**DAY 1**  
Rest Day  
Or Easy Cross-training  
(e.g., yoga, hiking, swimming)

**DAY 2**  
Threshold Ride 1x5:  
Warmup- 15min gradually increasing pace and effort  
Set- 1x5min Z4, 5min recoveries  
Warmdown- 10min easy

**DAY 3**  
Foundation Ride w/ 1x10 Tempo 15-20mi ride. Keep effort at Z2, except include 1x10min Z3.

**DAY 4**  
Rest Day  
Or Easy Cross-training  
(e.g., yoga, hiking, swimming)

**DAY 5**  
Tune-up Ride  
Warmup- 15min gradually increasing pace and effort  
Set- 2x5min build as 3min Z3, 2min Z4. 5min recoveries.  
Warmdown-10min

**DAY 6**  
RACE DAY!!!  
If you have the opportunity, warm up! It’s a great idea to include a few bursts of speed as well.  
Example: 10-15min easy spin, 5min build across Z3, finishing in Z4 with final 10 sec at sprint. Easy spin to race start.

**DAY 7**  
Celebrate!!!  
Celebrate your victories and ignore your inner critic until mid-next week when you’re rested enough to think reasonably. Today is about victories only!
